

Meeting Guide App Update

This is a special Meeting Guide announcement intended to help you stay informed about any changes or enhancements to the Meeting Guide app.

Major Release – 5.0

Version 5.0 of Meeting Guide was released on October 10, 2025. This release includes the following significant updates:

Dedicated Online Meeting Finder Tab

With Version 5.0, members now have the ability to search specifically for online meetings without being limited by their current geographic location.

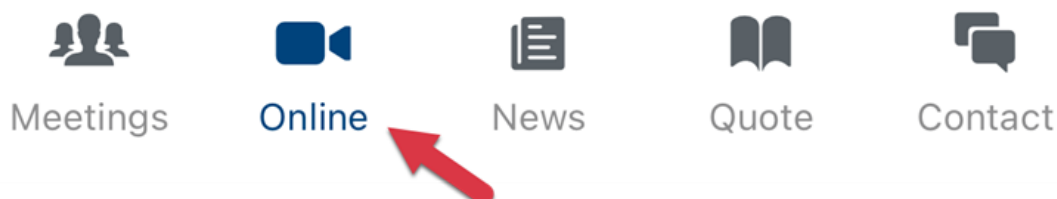

For those who want to attend online A.A. meetings, the new Online tab makes it easier to:

- Discover a wider variety of meetings across time zones and regions
- Find meetings that best fit their preferences
- Access online options beyond their immediate local area

The Online tab includes:

- Worldwide Listings: A global list of upcoming online meetings
- Expanded Filter Options: A wider set of meeting filters is available, including new options relevant to online meetings.
- Device Timezone Support: Meetings in this tab are displayed in the member's device timezone

Meeting Guide continues to provide a combined listing of local in-person and online meetings. Because they can be attended both online and in person, hybrid meetings appear in both the geographic listing and the Online tab.

Favorites Relocation

The Favorites feature continues to let members save meetings from the meeting detail page. In Version 5.0, access to Favorites has moved:

- **Previous location:** bottom navigation bar
- **New location:** top left corner of both the Meeting and Online views

Favorites saved in either view will appear in that view's list.

What's Next

The dedicated Online Meeting Finder tab is a new feature, and we will continue to monitor feedback and make adjustments to better support members who want to attend online A.A. meetings.

With so many online meetings now easily viewable, ensuring that accurate information is provided in listings is especially important. We appreciate the help of all participating entities with their ongoing efforts in maintaining accurate listings, which helps make the app more reliable and useful for everyone.

Support

For more information on using the new Online tab and expanded filters, please see the [support article here](#).
